# Our Features

# Flowmono Drive

# Cloud Management

Flowmono provides a secure cloud-based solution for organizing and managing your organization's processes. With Flowmono, you can conveniently organize your documents into folder repositories and keep track of all your documents; including archiving and retrieving.

Get automated notifications when documents are signed or expired.

Update expired contracts and access all previously signed versions of your documents.

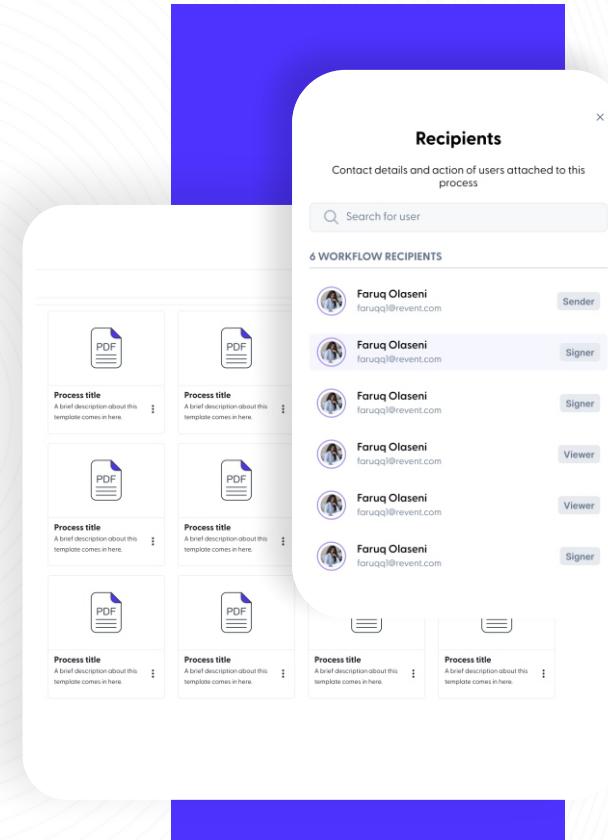

# Contract security and cloud storage

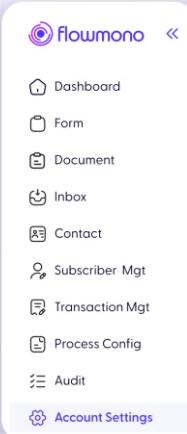

All your documents are stored in the cloud creating easy accessibility even after they expire.

**More storage when you opt for higher plans.**

Access your contracts from anywhere in the world.

## Secure highly sensitive contracts with a PIN.

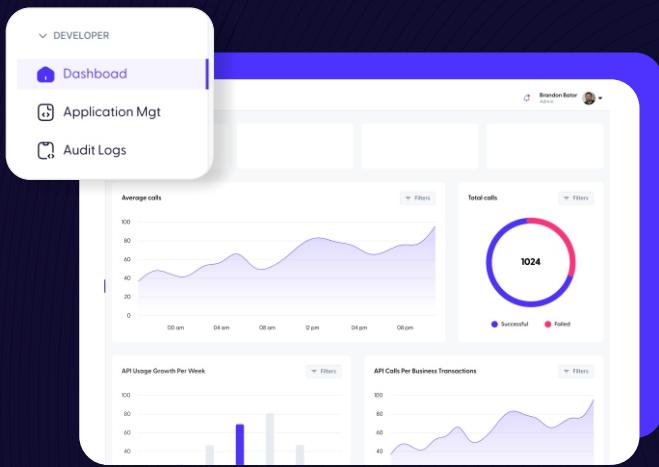

# Process Management

Flowmono allows you to automate your business processes according to your preference.

Create reusable document templates.

Use our customizable e-workflow engine to establish standardized processes.

Our software offers intelligent and secure signing features that enable you to automate your business processes according to your preferences.

# API TOOLS

Flowmono API tools facilitate seamless integration of your current contract management applications with Flowmono, enabling you to directly work on your contracts and other documents from your external app.

01

**Read your documentation**

02

**Connect your apps and generate your integration key.**

03

**Sign your documents directly from your applications.**

04

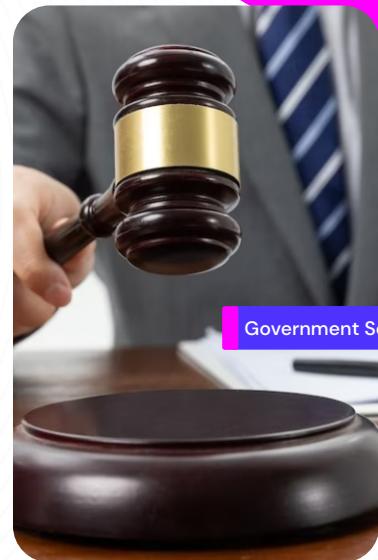

**Why not bring all documentation processes to Flowmono today, so all your documents can be in one place.**

Our goal is to foster **seamless and fast** collaboration digitally by creating an **easy process automation** that eliminates manual processes and improve efficiency, within and across organizations.

# Target Market

# Why Flowmono

Customized Services

Maximized Efficiency

Do more for Less

Fast, easy to use API

More Productivity

E-Help desk

Security

More Collaboration

## Fast and easy to use API

Our connectors will enable you to **easily carryout documentation documents via Flowmono** directly from your external applications. This would stop the need for end users to be signed up on Flowmono before they can start their documentation process.

## Do more for less

**Flowmono's form builder and dynamic process manager** empowers you to generate documents within the platform, associate them with a flexible workflow, and effortlessly publish them as a process across your organization with just one click.

## Maximized efficiency. **No duplication**

With Flowmono, you have access to the appropriate tools and real-time analytics to help you make informed business decisions and complete tasks quickly by monitoring all activities on documents or tasks. This includes tracking details like the duration a recipient spends reviewing a document.

## More productivity. **More collaboration.**

Easily Collaborate with your team and external recipients while automating your processes, signing and reviewing documents, forms, and contracts by easily configuring work processes and workflows.
